Version 1.5

Welcome To Immortality

Immortality coin, empowering progress in biomedicine and medical research through a decentralized science cryptocurrency. Stealth-launch on the 8th of November 2021, and this is version 1.5 of the whitepaper, released on the 12th of January 2024.

Gather round all, come near... we have all witnessed the highs and lows of the crypto market and many have been hurt, their scars invisible and more so than ever. Today we face a period of great uncertainty, real anxiety, and fear. Take that moment, reflect, reflect. Reflect on the tumultuous journey that the crypto market has traversed and set aside the pain and the doubt, for amidst uncertainty and volatility, Immortality coin remains steadfast in its vision, embracing an unyielding determination to foster progress in these vital fields, regardless of the challenges. For immortality inspires us with a vision that sets us on a path and commits us to continue regardless.

What if research and science were the single means of the creation of money, rather than greed and war? Such a system would catalyze and unleash breakthroughs across all fields and benefit everyone.

Amidst darkness, Immortality coin shines as a beacon of hope, shining a light that is immortal and forever. So that in every dark and in every night, it eventually gives forth to light. When shadows claw and doubts ignite, Immortality's spark burns ever brighter. In a voice so hushed, I whisper, a candle in the night, will carry all of our dreams on a single beam of light.

Around thieves, no system can function. Around good people, even bad systems succeed. Welcome to Immortality.

Project Lead

Kabusake Nakamoto

Official Homepage

<https://imt.cx>

Introduction, Crypto Lore & Tradition

Our journey was to answer the big questions, the mysteries. Science, more specifically medical research. What are the mechanics of aging, and what can we do to medicate? In the tradition of the alchemists, hack immortality and clock aging.

Our team leader, Kabusake Nakamoto, said this of our beginnings, “We are an experiment in decentralized science. The heretic brings the advances, the establishment fights change. We must therefore become heretics, for science.”

While none of us could have imagined it at the time, this was a concept that would start a revolution.

Projects built on the foundation of community involvement are the untamed wilderness of our future. As we move further away from rigid structures and traditional mindsets, we become free to discover new ways to solve problems and relate to one another. In a world ruled by the commodification of time, community-run projects are more than just a change of pace, they are a way to practice the radical acceptance of new scientific ideas.

When the generation of knowledge depends on the shared strength of the individuals who make up a collective, we are forced to shift our perspectives to align with those around us. Immortality is our way of recognizing the importance of tearing down this long-established paradigm that aging, illness and death are inevitable.

A community is held together by hundreds, if not thousands, of interconnected moments. By studying those drawn to our project, we realized that true strength does not come from one of us alone, it comes from working together in harmony.

With that thought bright in our minds, we began developing immortality in earnest.

Why Decentralize Science?

We are standing at a pivotal moment in innovation; a monetary system devoted to science, invention and research, decentralized science.

Until now, centralization has been mandatory and set in self-preservation. There have been times in our history where this sort of internal structure played an important role, but in an age with the information of the world available at the click of a button, it's time to rethink.

Recent events opened our eyes to how little control the average person has in the face of these overarching, generational structures. Over history, new science emerged and scientists spoke out. When scientists spoke out, it tested the waters, it was inspiring, but it did not last long. Just when the movement seemed to be on the brink of success, it was throttled by the bureaucracy of centralized structures.

People were beaten, murdered, burned alive and knowledge suppressed. Fake scientists appointed in their place, animals tortured and ignorance the order of the day. However, the flame and light of knowledge, center in our hearts and in our minds can never be extinguished and not before this concept of a new power among the people took hold.

Before any of these events made international news and were written about in books, Kabusake Nakamoto was already setting his 100% decentralized science based monetary system experiment into motion.

Why Immortality?

Knowledge and its manufacture is the single most expensive endeavor by far. While automation can handle menial tasks, brain power will always be in short supply, even with A.I. the thirst for engineers is greater and a re-shift of society from banking and loans to one based on research and science funding and training up more brains for brain jobs, rather than centralized war science used against societies, such as was the model of the trinity project society, community science for the betterment of society. This system based on the majority of humans in research careers is in contrast to universal basic income, in contrast to banking deposit and loans as the means to fund and order society. Such a society is decentralized and funds research as the primary means of legitimizing money. This is called DeSci [d-s-eye]. The Trinity project and the society that grew around it was the first example of building a society towards a common goal. Science is a large field, our part is to specialize in answering just one question. Aging and the diseases associated with aging, something that affects each and every person. The decentralized science is funded by everyone, and in turn everyone benefits.

Our Background

*You can only fight the way you practice.
-Miyamoto Musashi*

Kabusabe Nakamoto approached the creation of our community from a unique perspective.

“We believe through the power of collective decentralization we can build something stronger than a centralized team ever could create.

A token is nothing without the united individuals who give it purpose and all that give it its purpose, inclusive.”

From the early days of Immortality coin, it affected people deep inside and they immediately understood what was at stake. The prospect was too powerful to ignore and they committed, believed and invested.

And we also committed by the same force that brought us together and grew determined to achieve the goals of the project and to make the project even better.

Soon people began asking questions and brought forth issues relating to long lifespan, living without sickness and living forever, so principles were developed to build and bind the community to the mission, embracing our founding principles:

1. Money means nothing if you are sick and dying. Immortality coin is a matter of life and death. Investing is the wise choice.

2. Non-involvement. Immortal tyrants are forbidden. Immortals are forbidden to involve themselves in the affairs of politics and world affairs. They are forbidden to overlord beyond their generation, and they are forbidden to be tyrants, psychopaths, monopolize, or seek world power. Instead, they must learn humility, lay low and concern themselves with their reason for living so long.

3. Immortals must be deserving of their immortality. Be a good person, always. No petty crimes of any kind. High-end crimes considered if impressive, or if part of an image such as deviously brilliant.

4. Never give immortality to the evil and malevolent, the hateful, tyrants or warmongers. Those that spend their days at the expense of others and on the destruction of others. Rapists, those that force sex, murderers, destroyers, the hate-filled, those overly lofty and other weird types. Do not give immortality to people that are not ready to receive it, such as those that rape, murder, abuse drugs, the mentally ill and those that have issues and so on. Consciousness and idiocy is a bad mix. They are neither ready nor deserving of immortality. Don't have issues.

5. Work for your Immortality. We were not founded from an existing community, let alone a preassembled team. The brilliant minds behind immortality had never collaborated before, they were a fresh team of developers, designers, moderators, marketers. When you invested, from anywhere in the world, you found where your talents could be used best, and got to work to make your investment wise. This means everyone has to bring something to the table, so the holders and believers in immortality are the source of all the success.

6. Vegan, Immortals must be vegans for the association of sustenance must not be at the expense of life of others forever. That would be malevolence without end and misrepresents God as merciful for ending you, when he is also a meat eater and religions that are fake good but are human, child and animal sacrifice religions. Vegetarians are also fine if the welfare of the animals is acceptable. It is about maturity and enlightenment. Psychopaths are clearly visible among the vegans. Further on, Immortals must be a friend to all creatures, great and small. Kind to the

animals but not to evil animals such as mosquitoes. Mosquitoes need to be exterminated.

And we are devoted to immortality, we are proud of where we originated and equally excited for our future. Our founder, Tony Pagan, chose to start Immortality, and gave the direction of the currency to our investors (which rapidly grew strong). More and more people invest each day, fellow holders, admins, mods, leaders, users, and most of all, friends.

The Fountain of Youth, 1546 painting by Lucas Cranach the Elder

Project Goals

In recent years, the remarkable success of resveratrol has transformed the once fantastical notion of life and health extension into a tangible reality. The burgeoning field of longevity has witnessed exponential growth, attracting substantial investments from influential figures who are not only among the wealthiest, but also harbor a keen interest in extending their own lifespans. Visionaries such as Jeff Bezos, Larry Page & Sergey Brin, Peter Thiel, Michael Bloomberg and the collective innovation hub of Silicon Valley have actively contributed to the growing longevity industry. Vitalik Buterin, Richard Heart, Brian Armstrong are involved in numerous longevity companies and actively supporting various initiatives dedicated to combating the aging process.

The convergence of financial powerhouses, tech visionaries, colleges and universities, and cultural icons underscores the widespread commitment to advancing longevity research, demonstrating a collective determination to unravel the mysteries of aging and redefine the boundaries of human health and longevity.

The closer we get to cure aging, the more interest it attracts and the field is growing exponentially.

The field is subject to science, knowledge generation is super difficult and super expensive. Immortality is an experiment to harness crypto to inject as much as possible over years into curing aging and getting answers. It may take many billions to actually get answers to aging, longevity and health. Immortality itself is not for profit, all funds are channeled into the pursuit of knowledge relating to solving aging and disease.

We have history, and we have the mandate that ensures we forget any personal interest and instead, channel the funds into getting results. Aging will affect everyone and one day, if not already, you too will be a person unable to walk or raise your head. At worst, dementia could imprison you to a waking death. So, let us all get it solved before that happens. Most are insulated by a false sense of their own immortality, but that is an illusion and to those that can awaken, this project is an imperative.

Clarify the goals, the project is beginning its 3rd year

Medical is filled with unsolved problems and several years in medical research is beginners, medical research is forever and in the last few years we have learnt and adapted and while the project is fundamentally still the same, many aspects have changed.

No one has a system or even a cryptographic system that can fund society while being impervious to theft and corruption. Cryptography comes closer but advanced systems are complicated to code and they are difficult to convey and for little gain, these are meant to be financial products, people are self interested with little care for science and there are those that selfishly game it and destroy it without a second thought. Instead it is simpler to hold a portion of the token and do the same process manually, using it for venture capital, it gives the coin a unique ongoing narrative and potentially profitable end products feeding back into the system making the investment probable but the problem is the fund is an area of trust and uncertainty with rug pools and theft. No one in crypto trusts such a project and possibly reasonably. Immortality coin was such a setup, building a fund to fund science.

However, it is finally decided to phase out the research fund and instead code a new cryptocurrency titled Manhattan Group, a spin on the Manhattan Project. The Manhattan Project, served as a real-world example of a society driven by the singular goal of building an atomic bomb. Inspiring a dedicated currency that works in the same way. Coded in C and placing the entire decentralized science funding model in code. With all the checks the balances people require in a modern cryptocurrency. The DeSci module is under development and is currently simply, double the miner's reward and the gas fee, the miner would get the additional reward and gas fee under a locked condition, that it can only be donated to a select group of moonshots. The selection criteria was one that advances many fields for example, a better battery has wide range application, open source A.I and dish brain projects, space tourism, cure aging, renewable energy. Science does not currently have a funding model or system so we are having a crack at the problem.

We are working on solving the existing issues with cryptocurrencies such as quantum resistance, programmable wallets and so on that Manhattan Group is not earmarked for release in 2024, it is an ongoing project on GitHub.

Manhattan Group – DeSci Blockchain
<https://github.com/Immortality-IMT/Manhattan-Group>

And so in 2024, the Immortality research fund is to be phased out and all tokens in private hands, we shall do so before pursuing listings and various exchanges and coin listing sites. The governance is also obsolete, all tokens in private hands and everything locked. All this takes the person out of the system and the system is entirely code.

A person does not simply leave medical research and longevity, and we shall continue with immortality. The 3 goals of Immortality coin. Artificial intelligence (A.I.) & Organoid intelligence (O.I.). A.I. & O.I. is aiding in the lab, the clinic and in general with assistance and knowledge to personnel. Secondly, product lines, supplements

and pharmaceuticals, products and patents and finally designer medical clinic, next generation medical technologies.

1. Artificial intelligence (A.I.) & Organoid intelligence (O.I.)

We contribute to various open source A.I, projects on the Apache 2.0 or MIT license and we alter its training specifically with a subset of medical and biotechnology data so it can provide lab and clinic assistance. We are watching a new field of intelligence called organoid intelligence O.I. that we also want to employ when the technology reaches that level. Not only is A.I. able to provide enhanced function to the overall operation but it also aids in building our knowledge base.

Making a medical A.I. is a company on its own, let alone working with O.I. These are highly technical challenges and we need to keep up to date with the intelligence landscape and incorporate on an ongoing basis as it becomes more and more capable.

The way A.I. is assisting in the lab and clinic are...

- **Image analysis:** analyze medical images like X-rays, CT scans, MRI and pathology slides with high accuracy, assisting in assisting diagnoses of diseases like cancer, stroke, and pneumonia.
- **Lab test interpretation:** Analyze laboratory data from research and clinic, blood tests, tissue samples, and other sources, identifying patterns and anomalies that might be missed by humans, leading to better operation. In the lab, assisting biochemists with information that improves results for patents.
- **Genomics:** Analyze massive genetic datasets to identify risks for specific diseases, predict treatment responses, and patterns of gene interaction that might have a relationship to disease.
- **General assistance, improving productivity:** Provide general assistance and improved productivity in the lab and clinic to improve workflow and efficiency.

Med 3.0 is all about prevention and diagnosis before the disease state so a person can be pro-active, earlier, pre-diagnosis is central to that strategy.

Medical information and lifestyle plays the biggest role in personal health and longevity and the advantage of lifestyle documented concisely. As a person leads a healthy lifestyle, the pills and procedures can be effective.

Goals of our scientific literature.

- Lifestyle health information, our progress and science literature can be public through the website.

- Build concise answers and theories to how aging works in the human body, causation.
- Engage social media with video and text.
- Stay up to date.

The lifestyle component also has a type of gymnasium that is specifically for longevity, includes sauna, plunge pools and altered exercise regime.

2. Products, Supplements, Drugs and Aids (Marketplace)

The database of [age related drugs](#) has 1,821 entries. These do not include molecules relating to preventing all causes.

Immortality coin utility is the marketplace. The marketplace is our multi-vendor shopping platform that accepts Immortality coin, as well as Bitcoin and regular credit cards and it lists all of the products that can be purchased.

While a compound pill is unlikely due to the complexity of aging, we are still working on the efficacy of single molecules and other products. It is preferred to specialize on each portion of aging such as a healthy sunscreen or an anti-septic nasal spray, several compound pills are already in the market and a compound pill show efficacy beyond the current highest efficacy molecules that a product could be formed. Taking many molecules requires synergy as they could counter-act. Our lab does the work of quality and efficacy of the longevity products we list on marketplace.

The research also produces science documentation that is important in understanding and to ensure safety and efficacy.

Visit the Marketplace: <https://imt.cx/marketplace>

The Dev team has traveled the world and has opened a base close to major supply lines. We are not concerned with prescriptions. It is up to the customer to get clearance at their specific ports or entry. Our medical personnel may make some inquiries if its dangerous but they do not prescribe the drugs. For example, if a customer wants Rapamycin for anti-aging, we could check if they have medical issues and then make a determination or give professional advise but not withhold product and ship it out to them.

Non longevity specialized molecules products may also be manufactured, for example [Benzoxazole](#) which showed a 31% decrease in bone aging or another molecule such as Isrib that shows efficacy in the prevention of neuron-degeneration.

The manufacture of the products is likely to be Asia, India, China and SE Asia. These products will then be tested for quality control, purity and authenticity, packaged, ordered online and shipped to customers around the world. The process of quality control is done using machines and traditional bio-chemistry.

The licensing process is a challenge and limits what we can list on marketplace. There are many products that do not require license for sale.

3. The Private Clinic

The three states of longevity is evermore apparent that that clinic that provides those million dollar therapies to rich and famous. The rise of offshore clinics have produced some of the most advanced clinics on Earth.

Cancer has no cure, it is treated. Aging has no cure, it is not treated?

The rise of medical tourism is due to the situation that modern medicine is failing people. In their desperation they seek anyone that can help. This means state of the art, cutting edge medical procedures and highly specialized operations with specialized expertise.

And it is envisioned that the rich and famous want to go uber level when it comes to beauty and health.

The clinic is where life extension and health extension is to be realized. In clinics performing apheresis and regeneration treatments to specific organs and full body. Cancer is one field that has many cutting edge treatments that are not being utilized in preference for traditional surgery. These are surgical procedures, they require high intelligence, expertise and skill, such as gene therapies.

Building this expertise is a long term goal, therefore the singular clinic model. This is not industrial medicine or franchises, this is a one off specialized clinic. These are high cost treatments.

What do we expect to treat at this clinic?

Identify anything that works and add it to an arsenal to treat aging and to treat other all causes such as cancer and cardiovascular disease. Using a system of diagnostics, we make a plan from many therapies to treat aging and we are about advancing the procedures with the infrastructure to perform them and so we consider research and development important. The clinic allows us to put our research into practice with safety and efficacy. A big technology how we can leverage Yamanaka factors and how can we add genes or regulate genes.

Tokenomics

1. 888,888,888,888 Circulating supply
2. 444,444,444,444 Grants Fund (out of circulation) **to be phased out.**
3. 888,888,888,888 Total Supply
4. 2% Dev Team – Marketing and Operations (reflections from transactions, total supply is fixed)
5. 8% Interest To Hodlers Investors (reflections from transactions, total supply is fixed)
6. Can Burn – No.
7. Can Rebase – No.
8. No call backs. The smart contract is open source and renounced.
9. Liquidity is locked. Locked liquidity means that no one has no access to any funds and is a statement that we are committed to building the products that we promise.
10. Contract has renounced ownership, which makes it impossible to change contract code. The smart contract is locked to the blockchain and no one can change it.

The total amount of coins possible is 888,888,888,888 and it cannot be changed as contract ownership has been renounced, therefore the currency is deflationary.

Research Fund Phase Out Program

Half of the circulating supply was set aside as a research fund. The research fund holding 444,444,444,444 is to be phased out. As all token to be in private hands, without a fund, governance is obsolete and also phased out.

In 2024 the research is fund is to be phased out using the research fund phase out program, placing all tokens in private hands or on the open market.

The phase out program works as follows...

- Free air drops events.
- 1:1 air drop, receive the same amount of tokens as purchased.
- Faucet, free coins in return for promoting Immortality coin.

Commencement of the program to be announced on social media.

Immortality Code of the Future

Not For Profit

Immortality is not for profit. That is why we created the development wallet.

Donate to the address below to help the project:

Why Immortality Is A BEP-20 Token?

The invention of Ethereum was revolutionary to the blockchain ecosystem, for the first time ever people gained a way to launch their own tokens and smart contracts. For years, the Ethereum network was the default place for launching innovative blockchain based projects. However, Immortality redistribution rewards are generous at 8% and the development team requires 2% to conduct operations. We felt that this on top of the Ethereum gas fees was excessive and so we opted without prejudice for the next largest network being the Binance network. This is the reason that Immortality uses the technology of BEP-20 Token. Immortality officially went live on the 12th November 2021, utilizing the Binance smart blockchain. Immortality can be purchased on the various exchanges, namely the Bep20 swap, PancakeSwap.

How To Buy Immortality?

You can swap Binance Coin (BNC) for Immortality Coin (IMT) on the various swaps namely Pancakeswap. Binance offers their in house wallet named Binance Wallet which allows credit purchase of BNC and then once you have BNC you can swap it into IMT. It can also be purchased using other wallets, including the popular Metamask wallet by adding both Binance and IMT. Visit <https://imt.cx> for more info.

Safe Investing

The development team is always working on building a safe investment environment for our investors. We are doing this by...

- promoting the coin so that investment stays profitable.
- not engaging in impulsing the investor to buy.
- not engaging in predatory behaviors.
- building partnerships with trusted organizations.
- by genuinely committing to the project in an honest way.
- allowing time to prove the honesty and dedication of the project.

We understand that our actions can affect your investment, and so we shall work hard to keep the price stable and appreciating with time.

Proof of Immortality

Proof of locked liquidity:

Mudra Locker 7 years.

<https://mudra.website/?certificate=yes&type=0&lp=0xfa56e9abcaa45207be5e43cf475ee061768ca915>

Disclaimer

The content of this whitepaper is provided for information purposes only and shall not in any way constitute an investment advice or investment recommendation in any product discussed. You make investments at your own risk. It is recommended that you seek professional investment advice before making any investment decision. Any investment decision that you make should be based on an assessment of your risks in consultation with your investment adviser.

Immortality coin cryptocurrency is purchased from exchanges such as PancakeSwap. The development team does not receive any monies. Investors swap one value for another, which they still have, but the same value in the crypto coin rather than the previous currency they used. This is usually done with a speculation that in the future, the price goes up, and goes down, making that value either a positive or negative investment. It is also done when two parties agree to accept the token in commerce. Exchanges manage the trading and exchanges most often have no affiliation with the coins.

Cryptocurrency, namely Bitcoin was invented by Satoshi Nakamoto as a reaction to corruption in governments, central banks and financial departments. Their regulation can only lead to the same corruption. Cryptocurrencies are peer to peer with an open ledger rather than centralized and closed ledger. Every node has a complete copy of the ledger.

Documentation Updates

Documentation, website, whitepaper and documentation updates may occur without notice. Versions numbers are updated as required and changes summary may be included.

Changes

Version 1.1:

1. X-Prizes may be employed – such as a cure for gray hair and wrinkles.
2. Hoga, added directive to develop a stable trading strategy.
3. Kishie, added directive to get more people trading Immortality.

Version 1.2:

1. Added Grants Fund Governance

Version 1.3:

1. Automatic Hiring Policy
2. Automatic Dex Listing Policy
3. Team photo and email added

Version 1.4

1. Removed governance, grants fund governance
2. Removed automatic hiring policy
3. Removed automatic dex listing policy
4. Removed Dormant Maturation Period
5. Introduced the research fund phase program
6. Refresh of the entire whitepaper

Version 1.5

1. Rewrite, improved professionalism

***There is a
real evil
among us.***

***For millennia
it has hated
and
persecuted
science.***
